## KEY INVESTMENT THEMES

**US tariffs**

**European bond  
markets**

**Japan's  
transformation**

## Tariff trouble

Given US equities' recent performance investors will be assessing what conditions are necessary to re-enter the market. First is the policy outlook. The decision by President Donald Trump to delay many of his tariffs suggests there is some form of 'policy put', triggered by adverse market moves. Bilateral deals would avert the worst of a trade war and be positive for investor sentiment. As important is less pressure on the Federal Reserve – it's close to meeting its mandates of low unemployment and stable prices; investors will want to know it can do its job without prejudice. But valuations may need to adjust given the US equity risk premium remains much lower than in other markets. Finally, investors should take encouragement from history which suggests initial corrections of 10% or more have been followed by positive one-year returns, most of the time. The US is not cheap yet but investors should see positive performance given a sufficiently long holding period.

## European Bonds: Much ado about nothing

There is currently a rather wide gap between perception and reality. Investment research conveys the impression that we're in the middle of market turbulence. While this might be the case for a few specific asset classes, European fixed income markets tell a different story, at least gauged by their performance. Year-to-date, European government, corporate and high yield bond returns are all slightly positive and within a 0.3%-1.0% range. Despite the European Central Bank's three rate cuts in 2025 to date and a further 65 basis points in cuts priced in by year-end, Germany's March fiscal shock to European government bond markets has somewhat watered down broad fixed income performance. Looking ahead, investors are likely to consider the possible increase in government bond issuance alongside improved valuations, particularly in the credit space. For example, European high yield spreads have retraced almost 50% of the widening occurred between early March and early April, while still trading above their 2024 average.

## A pivotal time

Japan's economic transformation has been notable. At a macro level, its 2024 exit from negative interest rates and a positive wage-price cycle has been in the making for over 30 years. Its interest rate differential and weaker yen has boosted the attractiveness of exports. At the micro level, companies have achieved a remarkable turnaround, increasingly casting aside former well-established practices of no wage hikes and no price increases. Corporates are becoming more productive and profit oriented. Additionally, Japan's focus on sectors like robotics, automotive, and green technology has contributed to increased foreign allocations. Government encouragement for households to shift more savings into equities has equally played a role. The external environment has also been favourable, with global growth staying resilient. Looking ahead policymakers face a fine balancing act of maintaining a favourable gap between rates and growth, while confronted with weaker global growth, tariff uncertainty and a strengthening currency. That said, minding the immediate volatility, Japan's renaissance represents a longer-term fundamental shift.

## Asset Class Summary Views

Views expressed reflect CIO team expectations on asset class returns and risks. Traffic lights indicate expected return over a three-to-six-month period relative to long-term observed trends.

Positive	Neutral	Negative
----------	---------	----------

CIO team opinions draw on AXA IM Macro Research and AXA IM investment team views and are not intended as asset allocation advice.

<b>Rates</b>		Slower global growth should allow further central bank easing
<b>US Treasuries</b>		Federal Reserve eventually to reduce rates as economy slows, but inflation complicates timing
<b>Euro – Core Govt.</b>		ECB rate cuts mean there is some value in Euro bonds
<b>Euro – Govt Spreads</b>		Spreads offer good carry opportunities
<b>UK Gilts</b>		Economic slowdown should see Bank of England cut rates over course of 2025
<b>JGBs</b>		Tariff and trade uncertainty to keep Bank of Japan on hold; foreigners buying JGBs
<b>Inflation</b>		Short duration inflation-linked bonds should benefit from inflation spike
<b>Credit</b>		Attractive all-in yield and income but spreads at risk from weaker growth
<b>USD Investment Grade</b>		Valuations at more attractive levels and demand remains strong
<b>Euro Investment Grade</b>		Corporate spreads are expected to remain stable; tariffs are a risk
<b>GBP Investment Grade</b>		Sterling bonds retain a valuation premium giving decent income opportunities
<b>USD High Yield</b>		Better valuations but market at risk from any further US equity sell off
<b>Euro High Yield</b>		Yields around 6% or higher are attractive combined with lower ECB rate outlook
<b>EM Hard Currency</b>		Need to monitor tariff effects on different countries
<b>Equities</b>		Slower global growth will continue to hit performance in short term
<b>US</b>		Elevated volatility to remain and earnings forecasts weakening, but long-term growth positive
<b>Europe</b>		German fiscal plan is boosting long-term growth expectations
<b>UK</b>		UK valuations are very low; rate cuts and increased defence spending should help stocks
<b>Japan</b>		Upturn in industrial cycle will benefit Japanese stocks; tariffs are a risk
<b>China</b>		Technology sector leading market recovery on AI developments; tariffs are a risk
<b>Investment Themes*</b>		Artificial intelligence-related spending continues to be strong

\*AXA Investment Managers has identified several themes, supported by megatrends, that companies are tapping into which we believe are best placed to navigate the evolving global economy: Automation & Digitalisation, Consumer Trends & Longevity, the Energy Transition as well as Biodiversity & Natural Capital
